Class-Leading Hardware: Built with cutting-edge components to deliver unmatched and unrivalled performance and reliability, our hardware is manufactured to a very high standard and encompasses some of the most comprehensive and advanced technology that enhances the solution and overall customer experience. All hardware is “e” marked which ensures its compatibility with assets of all types and allows installations to be completed without concern.

Unrivalled User Interface (UI): Mzone is a comprehensive software platform designed for managing fleets efficiently. It offers features like real-time vehicle tracking, predictive analytics, route optimisation, and fleet maintenance management. The platform supports seamless integration with third-party systems and is tailored for large-scale logistics and fleet operations. Its continuous advancements and improvements ensure that the user experience is above expectations.

Expert Installation: We employ all our engineers and train them to the highest standards of skill and customer care. Each engineer is fully equipped with the latest tools and technology to ensure that the required work can be undertaken efficiently, safely and as a minimum, to industry standards. Located around the Country, the Pace engineers can be deployed to any location to provide on-site services as required.

Manufacturer Approved: Our experience and advanced skills in the industry, ensure that all installation and service work is completed to standards approved by the vehicle manufacturer. Our ability to work to OEM standards sets us apart from our competitors and provides peace of mind that the services and solutions that we provide will in no way have a detrimental effect on the vehicle or its performance.

Advanced Capabilities: Pace Track encompasses a plethora of solutions that provide important data and analytics to the vehicle operator. A clever convergent of Hardware, User Interface and Installation delivers advanced and integrated, intelligent solutions that are housed into a single ecosystem that provides real data that redefines the future of telematics whilst evolving to match an ever developing technological era.
