

# PACE VISION

## Solutions that deliver efficiency and cost saving

Our portfolio of solutions are both unique and bespoke. Our tailored packages are designed to meet an ever changing technological era without compromising on quality and service.

 Pace Track

 Pace Vision

 Pace Secure

 Pace AI Tech (DVS)

 Pace Pharma

 Pace Solutions

 Pace Safe

**AHD as standard.** Our camera systems have been designed to provide the highest quality of video footage available. Utilising the modern technology, our platform records all footage in AHD (Advanced High Definition) quality to ensure that important data is available and preserved for when its needed most.

**2TB encrypted HDD.** By utilising a 2TB hard-drive, our camera systems preserve footage for several months before being overwritten automatically. This feature ensures that even with several cameras installed, important footage is available when needed. The durability of our HDD ensures that it continues to operate for several years without failure or corruption. Its encryption ensures that only authorised operatives can view or download footage.

**4G Remote Access.** Our remote camera platform allows the live view and download of stored footage in the DVR. Our solutions meets the demands of GDPR and is hosted within our ISO 27001 compliant ecosystem. With its intuitive and easy to use UI, the system caters for immediate downloads and live view to ensure that incidents can be resolved and actioned quickly without waiting for the vehicle to return.

**Installed only by Pace Employed Engineers:** We employ all our engineers and train them to the highest standards of skill and customer care. Each engineer is fully equipped with the latest tools and technology to ensure that the required work can be undertaken efficiently, safely and as a minimum, to industry standards. Located around the Country, the Pace engineers can be deployed to any location to provide on-site services as required.

**Unique MDVR player:** Our MDVR player is bespoke to Pace and has built in encryption to enable direct HDD video transfer. This PC app plays a crucial part in ensuring that important footage can be retrieved and easily converted to MP4 before being sent to the third parties such as insurance companies.
